

ENHANCED SCANNING TOOL

TEAM MEMBERS:

Sakthi S M(202IT208)

Thenisha S (202IT252)

ABSTRACT:

As data shared in websites can be tracked by hackers .so to test our website vulnerability using some hacking tools which can also be used by normal people. A tool can perform scanning on websites for their vulnerability identification. It help us to find the weak website.

PROBLEM STATEMENT:

In the real world as opposed to the cyber world an attack is often preceded by information gathering. The emergence of ecommerce application and social networks, organization across the world generate the large amount of daily data. Information security is the most important issue in guaranteeing safe transmission of data through the web. As of now all of us are moving towards the digital information age, we need a secured network. As more and more users use the internet which attracts a lot of cyber-attacks. It required a computer and network security. Hubs which is very pernicious makes an issue in the system.
