# Abstract

- peel off transparent face mask helps to hydrate the skin, which is Jelly- type mask. Due to its transparent property, they are -water-soluble. Its aqueous solution is stable and as transparent as water. In this mask, the hydrophilic solvents are carefully blended to obtain progressive evaporation but also an immediate moisturizing effect. A water-soluble crystalline polymer that has excellent film forming, emulsifying and adhesive property. The polymeric compound in association with solvents also ensure good potential for dissolution and the absorption of all sebaceous materials from the skin surface. This type of mask is claimed to accelerate blood circulation and slow aging.

# Problem Statement Addressed

- Travelling dehydrates the skin. Skin can feel dry and dehydrated by the time the journey is over. The dry air during travel can irritate your skin, for those who with dry skin, the air can exacerbate the dryness, while those who have oily skin could produce excess oils to compensate for the dryness.

# Existing Solution to the Problem Addressed

- Using peel off transparent face mask traps the moisture in the skin and creates film that helps to hydrate and moisturize the skin
